

Kavita Rawat

FRONT-END DEVELOPER · NEXT.JS / REACT / TYPESCRIPT · 6+ YEARS

kavitarawat1214@gmail.com | +91 77218 04979 | kavita-dev.netlify.app | linkedin.com/in/kavita-rawat-6492a92a3 | github.com/KavitaR45

PROFESSIONAL SUMMARY

Next.js and React developer with 6+ years of experience building fast, accessible product interfaces. Owns front-end delivery end to end — component architecture, typed data layers over REST/GraphQL and ERP APIs, motion and 3D interaction, Core Web Vitals optimization and CI/CD releases on Netlify and Vercel. Uses Claude for AI-assisted development to accelerate build, refactor and review cycles. Works directly with founders and product leads across AI, martech and growth-marketing products.

TECHNICAL SKILLS

Core	Next.js (App & Pages Router), React, TypeScript, JavaScript (ES6+)
UI & Motion	Tailwind CSS, GSAP, Three.js, responsive & accessible component systems
Data & APIs	REST, GraphQL, ERP integrations, Supabase, Firebase, webhooks, Postman
AI-Assisted Dev	Claude / Claude Code for feature scaffolding, refactoring and code review
Performance	Core Web Vitals, Lighthouse, code splitting, image & font optimization, technical SEO
Delivery	Git & GitHub, Netlify, Vercel, CI/CD and preview deploys, Agile delivery

PROFESSIONAL EXPERIENCE

Front-End Developer — NetArt

2020 — Present

Own front-end delivery across NetArt's product and client work — component architecture, integration, performance and release.

Current Project — Planner (Internal Company Tool)

- Building Planner, an internal scheduling and workforce tool (Google-Calendar-style) replacing spreadsheet-based tracking for ~50+ employees. — Next.js, Firebase, ERP Integration
- Leave management: request, multi-level approval and balance tracking, cutting HR approval turnaround by ~40%.
- Two-way Google Calendar sync so meetings, leave and events stay consistent across tools in real time.
- Role-based to-do & event module: sales team logs doctor visits and generates quotations directly from their calendar; IT team tracks tasks and tickets — one board per department.
- ERP sync for attendance, event and quotation data, removing manual cross-system data entry and re-keying.
- Automated email/webhook notifications for approvals, visit follow-ups and task updates across ~5 departments.

Past Projects

- NetArt AI** — interactive AI experience mapping roles, departments and opportunities across the organization, built with Claude-assisted development; let new joiners self-explore ~50+ roles instead of manual walkthroughs. — Next.js, React, Claude Code, Netlify
- SYNC** — 3D, motion-led media platform connecting audience insight, advertising and digital video into one interactive experience; scroll-driven storytelling lifted average session time by ~30%. — Next.js, React, Three.js, Netlify
- Growth Scraper** — scalable company website with CMS integration so the content team ships updates independently, cutting content turnaround from days to hours; SEO-first structure and dedicated course/training pages drove ~40% of inbound leads through organic search. — Plasmic, Next.js, React, Vercel
- Cinopse** — end-to-end event registration platform with Firebase authentication, payment gateway and coupon-code integration, plus automated email and WhatsApp notifications; self-serve registration and instant payment confirmation cut manual follow-ups and sped up sign-ups by ~50%. — Next.js, Firebase

OPEN SOURCE

Typebot — Contributor

2024

- Contributed front-end fixes and UI improvements to the open-source conversational-form builder, working through issue triage, pull requests and maintainer review.
